Instance Method

tableView(_:pasteboardWriterForRow:)

Called to allow the table to support multiple item dragging.

macOS 10.7+

```
@MainActor
optional func tableView(
    _ tableView: NSTableView,
    pasteboardWriterForRow row: Int
) -> (any NSPasteboardWriting)?
```

Parameters

`tableView`
The table view.

`row`
The row.

Return Value

Returns an instance of `NSPasteboardItem` or a custom object that implements the `NSPasteboardWriting` protocol. Returning `nil` excludes the row from being dragged.

Discussion

This method is required for multi-image dragging.

If this method is implemented, then `tableView(_:writeRowsWithIndexes:to:)` will not be called.
