

[UIKit](#) / [UIView](#) / `cornerConfiguration`

Instance Property

cornerConfiguration

A configuration that defines the corners of the view.

iOS 26.0+ | iPadOS 26.0+ | Mac Catalyst | tvOS 26.0+ | visionOS 26.0+

```
@MainActor @preconcurrency
var cornerConfiguration: UICornerConfiguration { get set }
```

Discussion

For more information on how to configure view corners, see [UICornerConfiguration](#).

See Also

Configuring a view's corners

`struct UICornerConfiguration`

A configuration that defines how corner radii are mapped to the corners of a rectangle.

`struct UICornerRadius`

A type that represents the radius the system uses to round a corner.

`func effectiveRadius(corner: UIRectCorner) -> CGFloat`

Returns the effective radius for the corner you provide, calculated using the view's current corner configuration.
