# Unregister Merchant

Unregister one or more domains associated with a previously registered merchant.

Apple Pay Web Merchant Registration API 1.0+

---

## URL

**POST** `https://apple-pay-gateway.apple.com/paymentservices/unregisterMerchant`

## HTTP Body

`UnregisterMerchantRequest`

The request body for unregistering merchants.  
Content-Type: application/json

## Response Codes

<b>200</b>	<b>OK</b> Success.
<b>400</b>	<b>Bad Request</b> The request is malformed or invalid, or the merchant isn't registered.
<b>401</b>	<b>Unauthorized</b> The e-commerce platform doesn't have permission to call this API.
<b>417</b>	<b>Expectation Failed</b> The e-commerce platform isn't registered with Apple Developer.
<b>500</b>	<b>Internal Server Error</b> An internal server error occurred.

# Discussion

Only request to unregister merchants for domains you previously registered using the [Register Merchant](#) API.

If you pass a subset of the merchant's registered domains, Apple Pay server unregisters only those domains and the merchant remains active. If you unregister a merchant's last-remaining registered domain, Apple Pay servers delete the merchant's registration.

## Note

To access the sandbox environment, use POST `https://apple-pay-gateway-cert.apple.com/paymentservices/unregisterMerchant`.
