## Property List Key

# NSAlarmKitUsageDescription

A message that tells people why the app is requesting access to schedule alarms.

iOS 26.0+ | iPadOS 26.0+ | Mac Catalyst 26.0+

---

## Details

### Name

Privacy - Alarm Kit Usage Description

### Type

String

## Discussion

Include a descriptive string explaining why your app schedules alarms. This string appears in the system prompt when requesting authorization. If the `NSAlarmKitUsageDescription` key is missing or its value is an empty string, your app can't schedule alarms with AlarmKit.
