

[Immersive Media Support](#) / AIVUValidator

Structure

AIVUValidator

A type to validate existing AIVU files to ensure that they meet the minimum requirements for AIV.

macOS 26.0+ | visionOS 26.0+

```
struct AIVUValidator
```

Overview

An AIVU is a standalone media file with the one or more video and audio tracks, and AIV required static and dynamic metadata.

Topics

Type Methods

```
static func validate(url: URL) async throws -> Bool
```

Validates the AIVU file given its URL. It throws an error message with error details, if any.
