

[Foundation Models](#) / [SystemLanguageModel](#) / `supportsLocale(_:)`

Instance Method

supportsLocale(_:)

Returns a Boolean indicating whether the given locale is supported by the model.

iOS 26.0+ | iPadOS 26.0+ | Mac Catalyst 26.0+ | macOS 26.0+ | visionOS 26.0+

```
final func supportsLocale(_ locale: Locale = Locale.current) -> Bool
```

Mentioned in

 Support languages and locales with Foundation Models

Discussion

Use this method over `supportedLanguages` to check whether the given locale qualifies a user for using this model, as this method will take into consideration language fallbacks.
