Setting Up Your Server

Set up your server for secure communications with Apple Pay.

Overview

These are the requirements for incorporating Apple Pay on your website:

- You must serve all pages that include Apple Pay over HTTPS.
- Your domain must have a valid SSL certificate.
- Your server must support the Transport Layer Security (TLS) protocol version 1.2 or later, and one of the cipher suites listed here:

Cipher suite value	Name
0x13, 0x01	TLS_AES_128_GCM_SHA256
0x13, 0x02	TLS_AES_256_GCM_SHA384
0xC0,0x2B	ECDHE-ECDSA-AES128-GCM-SHA256
0xC0,0x2F	ECDHE-RSA-AES128-GCM-SHA256
0xC0,0x2C	ECDHE-ECDSA-AES256-GCM-SHA384
0xC0,0x30	ECDHE-RSA-AES256-GCM-SHA384

Allow Apple Pay IP Addresses

To successfully connect with Apple Pay IP addresses and domains, your server needs to allow access over HTTPS (TCP over port 443) and include the TLS Server Name Indication (SNI) extension. Apple Pay requires SNI on all connections. Your server needs to connect to the Apple Pay IP addresses and domains provided listed in [Setting Up Your Server](#), below.

Important
Use a strict allow list for Apple IP addresses and domains provided in [Setting Up Your Server](#). Do not allow your server to access any other IP addresses or domains.

Listing 1. Apple Pay IP addresses and domain names for production.

Domain

apple-pay-gateway.apple.com (Global)

This name resolves to the IP addresses / CIDR block below:

17.171.78.7/32, 17.171.78.71/32, 17.171.78.135/32, 17.171.78.199/32, 17.171.79.12/32, 17.141.128.7/32, 17.141.128.71/32, 17.141.128.135/32, 17.141.128.199/32, 17.141.129.17.32.214.7/32, 17.157.96.181/32

17.33.194.239/32, 17.33.192.38/32, 17.33.193.110/32

17.33.202.35/32, 17.33.201.101/32, 17.33.200.169/32

Domain

cn-apple-pay-gateway.apple.com (China Region)

This name resolves to the IP addresses / CIDR block below:

101.230.204.232/32, 101.230.204.242/32, 101.230.204.240/32

60.29.205.104/32, 60.29.205.106/32, 60.29.205.108/32

Important
Use the IP addresses, in [Setting Up Your Server](#) for development and sandbox testing only. Do not allow your production apps or production servers to use these testing services in production.

Listing 2. Apple Pay IP addresses and domain names for testing (development sandbox).

For sandbox testing only:

Domain

apple-pay-gateway-cert.apple.com (Global)

This name resolves to the IP addresses / CIDR block below:

17.171.85.7/32

17.179.124.181/32, 17.32.214.56/32

17.33.194.218/32, 17.33.192.145/32, 17.33.193.45/32

17.33.200.47/32, 17.33.202.99/32, 17.33.201.105/32

Domain

cn-apple-pay-gateway-cert.apple.com (China Region)

This name resolves to the IP addresses / CIDR block below:

101.230.204.235/32

For more information about merchant validation, see [Providing Merchant Validation](#).

Allow Apple IP Addresses for Domain Verification

Apple uses the following IP addresses when you register or verify your merchant domain. If you protect your domain from public access and you wish to complete domain verification, you need to allow the following IP address ranges.

17.23.4.96/27

17.23.19.0/27

17.23.24.32/27

17.32.139.128/26

17.132.108.64/26

17.140.126.0/26

17.157.32.0/27

17.157.40.128/27

17.157.44.128/27

17.179.144.128/25

17.253.0.0/16

See [Configuring Your Environment](#) for more information.
