```
struct Status
```

Mentioned in

 [Choosing a StoreKit API for In-App Purchases](#)

Overview

The subscription status provides renewal information signed by the App Store for subscriptions that a customer purchases.

Topics

Monitoring subscription status changes

```
static var updates: Product.SubscriptionInfo.Status.Statuses
```

The asynchronous sequence that emits status information when a subscription's status changes.

```
static var all: AsyncStream<(groupID: String, statuses: [Product.SubscriptionInfo.Status])>
```

`struct Statuses`

An asynchronous sequence that listens for new subscription status information.

Getting subscription status information

```
let state: Product.SubscriptionInfo.RenewalState
```

The renewal state of the auto-renewable subscription.

```
let renewalInfo: VerificationResult<Product.SubscriptionInfo.RenewalInfo>
```

The signed renewal information for the auto-renewable subscription.

```
let transaction: VerificationResult<Transaction>
```

The latest transaction for the subscription group.

```
struct RenewalInfo
```

The renewal information for an auto-renewable subscription.

```
struct RenewalState
```

The renewal states of auto-renewable subscriptions.
