

[App Store Connect API](#) / CiCompletionStatus

Type

CiCompletionStatus

A string that represents the completion status of an Xcode Cloud build.

App Store Connect API 1.5+

```
string CiCompletionStatus
```

Possible Values

SUCCEEDED

FAILED

ERRORED

CANCELED

SKIPPED

Possible values

SUCCEEDED

Xcode Cloud successfully completed a build.

FAILED

The Xcode Cloud build failed; for example, if you configure the Required to Pass setting for a test action and a unit test fails. For more information, see [Add a Test Action in Configuring your Xcode Cloud workflow's actions](#).

ERRORED

Xcode Cloud encountered an internal error when it performed the build.

CANCELED

Xcode Cloud canceled the build because you manually canceled an ongoing build or because you enabled the Auto-cancel Builds setting for a workflow. For more information about the Auto-cancel Builds setting, see [Xcode Cloud workflow reference](#).

SKIPPED

Xcode Cloud skipped the build; for example, if you configure the Auto- termcancel Builds setting for a workflow and push many changes in quick succession.

See Also

Objects and Types

`object CiBuildRun.Attributes.DestinationCommit`

The latest commit of a pull request's target branch or the source commit for builds that aren't pull request builds.

`object CiBuildRun.Attributes.SourceCommit`

The latest commit of a Git branch or tag, or of a pull request's source branch.

`object CiGitUser`

The data structure that represents a Git Users resource.

`object CiIssueCounts`

The data structure that represents an Issue Counts resource.

`type CiExecutionProgress`

A string that represents the progress of an ongoing Xcode Cloud build.
