API Collection

# Resources

Access assets and other data bundled with your app.

## Topics

### Bundle Resources

```
class Bundle
```

A representation of the code and resources stored in a bundle directory on disk.

```
macro bundle() -> Bundle
```

Expands to a bundle instance that's most likely to contain resources for the calling code.

### On-Demand Resources

```
class NSBundleResourceRequest
```

A resource manager you use to download content hosted on the App Store at the time your app needs it.

## See Also

### App Support

☰ Task Management

Manage your app's work and how it interacts with system services like Handoff and Shortcuts.

## ☰ Notifications

Design patterns for broadcasting information and for subscribing to broadcasts.

## ☰ App Extension Support

Manage the interaction between an app extension and its hosting app.

## ☰ Errors and Exceptions

Respond to problem situations in your interactions with APIs, and fine-tune your app for better debugging.

## ☰ Scripting Support

Allow users to control your app with AppleScript and other automation technologies, or run scripts from within your app.
