

[Foundation](#) / [NSExtensionItem](#) / attachments

Instance Property

attachments

An optional array of media data associated with the extension item.

iOS 8.0+ | iPadOS 8.0+ | Mac Catalyst 13.1+ | macOS 10.10+ | tvOS 9.0+ | visionOS 1.0+ | watchOS 2.0+

```
var attachments: [NSItemProvider]? { get set }
```

Discussion

Populate this array with images, videos, URLs, and so on. It's not meant to be an array of alternative data formats or types, but is instead a collection to include in a social media post, for example. These items are always typed [NSItemProvider](#).

Important

Alternatively, you can set attachments in the [userInfo](#) dictionary using the [NSExtensionItemAttachmentsKey](#) key. However, setting the [userInfo](#) dictionary after setting [attachments](#) will override this property.

See Also

Item Contents

```
var attributedContentText: NSAttributedString?
```

An optional string describing the extension item content.
