

[AVFoundation](#) / [AVCaptureDeviceInput](#) / multichannelAudioMode

Instance Property

multichannelAudioMode

The multichannel audio mode to apply when recording audio.

iOS 18.0+ | iPadOS 18.0+ | Mac Catalyst 18.0+ | macOS 15.0+ | tvOS 18.0+

```
var multichannelAudioMode: AVCaptureMultichannelAudioMode { get set }
```

Discussion

This property only takes effect when the system routes audio through the built-in microphone. The system ignores the value when an external microphone is in use.

The default value is `AVCaptureMultichannelAudioMode.none`, which indicates to use single channel audio recording.
