

[Apple CryptoKit](#) / Insecure

Enumeration

Insecure

A container for older, cryptographically insecure algorithms.

iOS 13.0+ | iPadOS 13.0+ | Mac Catalyst 13.0+ | macOS 10.15+ | tvOS 13.0+ | visionOS 1.0+ | watchOS 6.0+

`enum` Insecure

Overview

Important

These algorithms aren't considered cryptographically secure, but the framework provides them for backward compatibility with older services that require them. For new services, avoid these algorithms.

Topics

Hashes

`struct` MD5

An implementation of MD5 hashing.

`struct` SHA1

An implementation of SHA1 hashing.

Structures

`struct MD5Digest`

The output of a MD5 hash.

`struct SHA1Digest`

The output of a SHA1 hash.

Relationships

Conforms To

`Sendable`, `SendableMetatype`
