

[AppKit](#) / [NSAccessibilityElement](#) / `accessibilityAddChildElement(_:)`

Instance Method

accessibilityAddChildElement(_:)

Adds a child to the accessibility element in the accessibility hierarchy.

macOS 10.10+

```
func accessibilityAddChildElement(_ childElement: NSAccessibilityElement)
```

Parameters

childElement

The child element to be added.

Discussion

Calling this method sets up the proper parent-child relationship between the current element and the provided child element.
