# Verify with Wallet Document Requests

Review how your app uses identity and authorization APIs.

## Overview

The data in this report shows calls to the `PKIdentityAuthorizationController requestDocument` API by apps requesting identity documents from Wallet.

- Territories: Worldwide
- Platforms: iOS, iPadOS. For more information about iOS and iPadOS, see the Platforms section in [Data Completeness and Corrections](#).
- Availability:
  - Daily: Every day.
- History: On request, data is available beginning with iOS 17.4 and iPadOS 17.4.
- Completeness: Data from devices that contribute to this report can arrive as late as 8 days after the date it generates on device. You can download recent data daily, but it might be incomplete, and data updates incrementally daily, until all late-arriving events are available.
- Privacy:
  - Includes data from users who have opted to share their data with Apple and developers.
  - Individual rows will only appear if they have a value of 5 or more.
- Data Context: You can analyze your data with additional context by comparing it with the data in the [App Sessions Context](#) report, which provides a count of unique devices that use your app on a specific day. For example, if your app performed an action detailed in this report on 10 unique devices on a specific day, and the App Sessions Context report shows there were 100 unique devices running your app that day, then you can approximate that 10% of the devices running your app performed that action.

# Report Fields

Report Field	Description	Data Type
Count	Number of times the event occurred	integer
Territory	Country or region in which the event occurred	string
Date	Date when the event occurred	string
Platform	OS version on the device on which the event occurred	string
Device	Type of device on which the event occurred	string
Build	Build of device on which event occurred	string
Unique Devices	The count of unique devices	integer
Release Type	Type of software release	string
Address	If set, the app requests the user's address. The value is the retention period specified by the app (-1 means "indefinite retention", -2 means "no retention").	integer
Age	If set, the app requests the user's age. The value is the retention period specified by the app (-1 means "indefinite retention", -2 means "no retention").	integer
Age At Least	If set, the app requests whether the user is above a certain age. The value is the retention period specified by the app (-1 means "indefinite retention", -2 means "no retention").	integer
Age at Least Years	If the "ageAtLeast" element is populated, this is the age that the app requests.	integer
Date of Birth	If set, the app requests the user's date of birth. The value is the retention period specified by the app (-1 means "indefinite retention", -2 means "no retention").	integer
Document Expiration Date	If set, the app requests the expiration date of the user's document. The value is the retention period specified by the app (-1 means "indefinite retention", -2 means "no retention").	integer

Report Field	Description	Data Type
Family Name	If set, the app requests the user’s family name. The value is the retention period specified by the app (-1 means “indefinite retention”, -2 means “no retention”).	integer
Driving Privileges	If set, the app requests the user’s driving privileges. The value is the retention period specified by the app (-1 means “indefinite retention”, -2 means “no retention”).	integer
Document Type	The type of document the app requests	string
Document Number	If set, the app requests the document number of the user’s document. The value is the retention period specified by the app (-1 means “indefinite retention”, -2 means “no retention”).	integer
Portrait	If set, the app requests the user’s portrait. The value is the retention period specified by the app (-1 means “indefinite retention”, -2 means “no retention”).	integer
Outcome	Strings that describe the outcome of the requestDocument call	string
Is Developer Test ID	If true, the document is a test ID instead of a real ID	boolean
Issuing Authority	If set, the app requests the issuing authority of the user’s document. The value is the retention period specified by the app (-1 means “indefinite retention”, -2 means “no retention”).	integer
Given Name	If set, the app requests the user’s given name. The value is the retention period specified by the app (-1 means “indefinite retention”, -2 means “no retention”).	integer

## Glossary

Dimension	Value	Definition
Document Type	drivers-license	A US driver’s license
Outcome	success	Presentment succeeded

Dimension	Value	Definition
Outcome	userCancelled	User cancelled the sheet
Outcome	appCancelled	The app cancelled the sheet
Outcome	validationFailed	The provided request was invalid
Outcome	presentmentFailed	Some other error prevented presentment
