

[Intents](#) / [INStartWorkoutIntentHandling](#) / `resolveWorkoutLocationType(for:with:)`

Instance Method

resolveWorkoutLocationType(for:with:)

Resolves the location type of a user's workout.

iOS 10.0+ | iPadOS 10.0+ | Mac Catalyst 13.1+ | visionOS 1.0+ | watchOS 3.2+

```
optional func resolveWorkoutLocationType(
    for intent: INStartWorkoutIntent,
    with completion: @escaping (INWorkoutLocationTypeResolutionResult) -> Void
)
```

```
optional func resolveWorkoutLocationType(for intent: INStartWorkout
Intent) async -> INWorkoutLocationTypeResolutionResult
```

Parameters

intent

The intent object that contains details about the user's request. Use this object to get the initial information, if any, provided by the user.

completion

The block to execute with the resolution. You must execute this block while implementing this method. This block has no return value and takes the following parameter:

resolutionResult

The object containing the details of your proposed resolution. For a successful resolution, create a resolution result that includes the [INWorkoutLocationType](#) constant you plan to use for the workout location.

Discussion

This method resolves the user-supplied workout location. If you don't implement this method, SiriKit assumes that you're able to start the workout in the specified location.
