

[SwiftUI](#) / [View](#) / `equatable()`

## Instance Method

# equatable()

Prevents the view from updating its child view when its new value is the same as its old value.

iOS 13.0+ | iPadOS 13.0+ | Mac Catalyst 13.0+ | macOS 10.15+ | tvOS 13.0+ | visionOS 1.0+ | watchOS 6.0+

```
nonisolated
func equatable() -> EquatableView<Self>
```

Available when `Self` conforms to `Equatable`.

## See Also

### Managing the view hierarchy

```
func id<ID>(ID) -> some View
```

Binds a view's identity to the given proxy value.

```
func tag<V>(V, includeOptional: Bool) -> some View
```

Sets the unique tag value of this view.
