# Error Information

Diagnose errors generated by the Contacts framework.

## Topics

### Error domain

```
let CNErrDomain: String
```

The error domain for the Contacts framework.

### Error codes

```
struct CNErr
```

Error information that may be returned when using the methods of the Contacts framework.

```
enum Code
```

Error codes that the system may return when you use Contacts framework methods.

### Error data keys

```
let CNErrUserInfoAffectedRecordsKey: String
```

The contact, group, and container objects for which the error code applies.

```
let CNErrUserInfoAffectedRecordIdentifiersKey: String
```

String objects for which the error code applies.

```
let CNErrUserInfoValidationErrorsKey: String
```

An array of validation-related error objects.

```
let CNErrrorUserInfoKeyPathsKey: String
```

An array of key paths associated with a given error.

## Exceptions

```
let CNContactPropertyNotFetchedExceptionName: String
```

Exception thrown when an accessed property was not fetched.
