# Ad network attribution

Validate advertisement-driven app installations.

## Topics

### Ad impressions and installation validations

- 📄 Understanding AdAttributionKit and SKAdNetwork interoperability  
Learn how attribution APIs interact to deliver ad impressions.

`class SKAdNetwork`

A class that validates advertisement-driven app installations.

`class SKAdImpression`

A class that defines an ad impression for a view-through ad.

### Error handling

`let SKANErrorDomain: String`

A string that identifies the SKAdNetwork error domain.

`struct SKANError`

An error that an ad network attribution operation returns.

`enum Code`

Constants that indicate the type of error for an ad network attribution operation.
