

[App Store Connect API](#) / Users

API Collection

Users

Manage users on your App Store Connect team.

Overview

The `users` resource represents an App Store Connect user. You can change or delete users, but you cannot add them directly. To add users, create a `userInvitation`. App Store Connect adds the user to your team when they accept the invitation.

Topics

Getting User Information

List Users

Get a list of the users on your team.

Read User Information

Get information about a user on your team, such as name, roles, and app visibility.

Modifying and Removing User Accounts

Modify a User Account

Change a user's role, app visibility information, or other account details.

Remove a User Account

Remove a user from your team.

Listing, Adding, and Removing App Access

List All Apps Visible to a User

Get a list of apps that a user on your team can view.

Get All Visible App Resource IDs for a User

Get a list of app resource IDs to which a user on your team has access.

Add Visible Apps to a User

Give a user on your team access to one or more apps.

Replace the List of Visible Apps for a User

Replace the list of apps a user on your team can see.

Remove Visible Apps from a User

Remove a user on your team's access to one or more apps.

Objects and Data Types

`object User`

The data structure that represents a Users resource.

`object UserUpdateRequest`

The request body you use to update a User.

`object UserResponse`

A response that contains a single Users resource.

`object UsersResponse`

A response that contains a list of Users resources.

`object UserVisibleAppsLinkagesRequest`

A request body you use to add or remove visible apps from a user.

`object UserVisibleAppsLinkagesResponse`

A response body that contains a list of related resource IDs.

`type UserRole`

Strings that represent user roles and permissions in App Store Connect.
