

[Video Subscriber Account](#) / [VSUserAccountManager](#) / `updateAutoSignInToken(_:updateContext:)`

## Instance Method

# updateAutoSignInToken(\_:updateContext:)

Sets the current Automatic Sign-In token.

iOS 26.0+ | iPadOS 26.0+ | tvOS 26.0+

```
func updateAutoSignInToken(
    _ newToken: String,
    updateContext: VSUserAccountManager.AutoSignInTokenUpdateContext
) async throws
```

## Parameters

### newToken

The new token value to store in the person's Apple Account. Your app determines the contents of this string using a mechanism you determine fitting to identify the account. In addition, ensure its value is of sufficient length, complexity, and security. For more information on setting this property, see [value](#).

### updateContext

The object the framework provides that reflects the person's choice in the authorization prompt; pass the result of the [requestAutoSignInAuthorization\(\\_:\)](#) method.

## Mentioned in

 [Signing people in to their media accounts automatically](#)

# Discussion

Call this method when generating a new token value for an account. To update the token, request the person's authorization for Automatic Sign-In. For more information, see [requestAutoSignInAuthorization\(\)](#).
