Type

String

Discussion

This key is used in conjunction with the [NSExtensionServiceAllowsFinderPreviewItem](#) key.

Set the [NSExtensionServiceFinderPreviewIconName](#) key's value to a system icon name or the name of an icon in the extension bundle. This icon should be a *template image*: a monochromatic image with transparency, anti-aliasing, and no drop shadow that uses a mask to define its shape. For design guidance, see [Human Interface Guidelines > macOS > Custom Icons](#). If no icon is specified, a default icon is used.

See Also

Quick Actions

`NSExtensionServiceAllowsFinderPreviewItem`

A Boolean value indicating whether the extension appears in the Finder Preview pane and Quick Actions menu.

`NSExtensionServiceFinderPreviewLabel`

A name for display when the extension appears in the Finder Preview pane and Quick Actions menu.

`NSExtensionServiceRoleType`

The type of task an Action extension performs.
