Case

VSUserAccountManager.AutoSignInAuthorization.notDetermined

A state that indicates the framework needs to reauthorize Automatic Sign-In.

iOS 26.0+ | iPadOS 26.0+ | macOS 26.0+ | tvOS 26.0+ | visionOS 26.0+

`case notDetermined`

Mentioned in

Discussion

This authorization state indicates that either a person hasn't answered the prompt to opt in to Automatic Sign-In, or that the app (or server) deletes the token value.

When [authorization](#) for the current Automatic Sign-In token is this state, the app needs to call [requestAutoSignInAuthorization\(\)](#) again before creating a token value for the account.

For more information, see [Signing people in to their media accounts automatically](#).
