 [Generating content and performing tasks with Foundation Models](#)

Discussion

Important

You should not call any of the respond methods while this property is true.

Disable buttons and other interactions to prevent users from submitting a second prompt while the model is responding to their first prompt.

```
struct ShopView: View {
    @State var session = LanguageModelSession()
    @State var joke = ""

    var body: some View {
        Text(joke)
        Button("Generate joke") {
            Task {
```

```
        assert(!session.isResponding, "It should not be possible to tap this  
        joke = try await session.respond(to: "Tell me a joke").content  
    }  
}  
    .disabled(session.isResponding) // Prevent concurrent calls to respond  
}  
}
```
