

[App Tracking Transpare...](#) / [ATTrackingManager](#) / `trackingAuthorizationStatus`

Type Property

trackingAuthorizationStatus

The authorization status that is current for the calling application.

iOS 14.0+ | iPadOS 14.0+ | Mac Catalyst 14.0+ | macOS 11.0+ | tvOS 14.0+ | visionOS 1.0+

```
class var trackingAuthorizationStatus: ATTrackingManager.AuthorizationStatus { get }
```

Return Value

Information about your application's tracking authorization status. Users are able to grant or deny developers tracking privileges on a per-app basis. Application developers must call `requestTrackingAuthorizationWithCompletionHandler:` for the ability to track users.

Discussion

If the user has not yet been prompted to approve access, the return value will either be `ATTrackingManagerAuthorizationStatusNotDetermined`, or `ATTrackingManagerAuthorizationStatusRestricted` if this value is managed. Once the user has been prompted, the return value will be either `ATTrackingManagerAuthorizationStatusDenied` or `ATTrackingManagerAuthorizationStatusAuthorized`.

Use the [trackingAuthorizationStatus](#) property to check authorization status.
