

[App Intents](#) / Common types

API Collection

# Common types

Specify common types that your app supports, including currencies, files, and contacts.

## Overview

Use these types to manage specific types of data when you create a parameter for an app intent or a property for an app entity.

## Topics

### Contacts

```
struct IntentPerson
```

Information that identifies a person participating in an intents-based interaction.

### Files

```
struct IntentFile
```

An interface for providing an app entity that represents an on-disk file or file-based resource.

### Monetary types

```
struct IntentCurrencyAmount
```

An amount of money to transfer during a financial transaction.

`struct IntentPaymentMethod`

Information about a form of payment supported by your app.

## Items and collections

`struct IntentItem`

A type describing a value returned from a dynamic options provider, plus information about how to display it to users.

`struct IntentItemCollection`

Return this object to provide an advanced list of options, optionally divided in sections.

`struct IntentItemSection`

An object you use to divide dynamic options into sections.

`struct IntentCollectionSize`
