

[AdAttributionKit](#) / [Postback](#) / `updateConversionValue(_:lockPostback:)`

## Type Method

# updateConversionValue(\_:lockPostback:)

Updates a conversion value with the provided fine and coarse conversion values, and optionally locks the postback, reducing the system time to deliver a signal.

iOS 17.4+ | iPadOS 17.4+ | Mac Catalyst

```
static func updateConversionValue(
    _ fineConversionValue: Int,
    lockPostback: Bool
) async throws
```

## Parameters

### `fineConversionValue`

An integer that defines the fine conversion value.

### `lockPostback`

A Boolean value that indicates whether the system can lock the postback, reducing the system time to deliver a signal.
