iOS 13.0+ | iPadOS 13.0+ | watchOS 9.0+ | Xcode 14.0+

Overview

Note

This sample code project is associated with WWDC22 session [10133: Build a productivity app for Apple Watch](#).

Configure the sample code project

Before you run the sample code project in Xcode:

1. Open the sample with the latest version of Xcode.
2. Select the top-level project.
3. Select the correct team in the Signing & Capabilities pane for both of the targets to let Xcode automatically manage your provisioning profile.
4. Make a clean build and run the sample app on your device.
