Article

# ARKit World Tracking

Review the configured settings for world tracking in your app.

## Overview

The data in this report details the options configured for World Tracking.

- Territories: Worldwide
- Platforms: iOS, iPadOS. For more information about iOS and iPadOS, see the Platforms section in [Data Completeness and Corrections](#).
- Availability:
  - Daily: Every day.
- History: On request, data is available beginning with iOS 17.4 and iPadOS 17.4.
- Completeness: Data from devices that contribute to this report can arrive as late as 8 days after the date it generates on device. You can download recent data daily, but it might be incomplete, and data updates incrementally daily, until all late-arriving events are available.
- Privacy:
  - Includes data from users who have opted to share their data with Apple and developers.
  - Individual rows will only appear if they have a value of 5 or more.
- Data Context: You can analyze your data with additional context by comparing it with the data in the [App Sessions Context](#) report, which provides a count of unique devices that use your app on a specific day. For example, if your app performed an action detailed in this report on 10 unique devices on a specific day, and the App Sessions Context report shows there were 100 unique devices running your app that day, then you can approximate that 10% of the devices running your app performed that action.

# Report Fields

Report Field	Description	Data Type
Count	Number of times the event occurred	integer
Territory	Country or region in which the event occurred	string
Date	Date when the event occurred	string
Platform	OS version on the device on which the event occurred	string
Device	Type of device on which the event occurred	string
Build	Build of device on which event occurred	string
Unique Devices	The count of unique devices	integer
Release Type	Type of software release	string
Automatic Image Scale Estimation	Whether automatic image scale estimation is enabled	boolean
Collaborative Session	Whether the collaborative session feature is enabled	boolean
HDR Environment Texturing	Whether the session uses HDR environment texturing	boolean
Environment Texturing Mode	The configured environment texturing mode	integer
AR Frame Semantics	The configured frame semantics	integer
Number Of Tracked Images	The maximum number of images tracked in parallel	integer
Plane Detection Mode	The configured plane detection mode	integer
Scene Reconstruction Mode	The configured scene reconstruction mode	integer
User Face Tracking	Whether user face tracking is enabled	boolean

Report Field	Description	Data Type
App Clip Code Tracking	Whether App Clip Code Tracking is enabled	boolean
