

## □ Documentation

---

[App Store Receipts](#) / `responseBody` Deprecated

### Object

## responseBody Deprecated

The JSON data that returns in the response from the App Store.

App Store Receipts 1.0–1.7 Deprecated

`object responseBody`

#### Deprecated

The [verifyReceipt](#) endpoint is deprecated.

## Properties

### `environment`

string

Deprecated The environment the system generates the receipt for.

Possible Values: Sandbox , Production

### `is_retryable`

boolean

Deprecated An indicator when an error occurs during the request. A value of 1 indicates a temporary issue; retry validation for this receipt at a later time. A value of 0 indicates an unresolvable issue; don't retry validation for this receipt. This is applicable only to status codes 21100–21199.

### `latest_receipt`

byte

Deprecated The latest Base64-encoded app receipt. This only returns for receipts that contain auto-renewable subscriptions.

### `latest_receipt_info` [`responseBody.Latest_receipt_info`]

Deprecated An array that contains all in-app purchase transactions. This excludes transactions for consumable products that your app marks as finished.

### `pending_renewal_info`

Deprecated In the JSON file, an array where each element contains the pending renewal information for each auto-renewable subscription the

```
[responseBody  
.Pending_renewal  
_info]
```

product\_id identifies. This only returns for app receipts that contain auto-renewable subscriptions.

~~receipt~~

```
responseBody.Receipt
```

~~status~~

~~status~~

**Deprecated** A JSON representation of the receipt that you send for verification. The status code reflects the status of the app receipt as a whole. See [status](#) for possible status codes and descriptions.

## Discussion

The [verifyReceipt](#) endpoint returns this response.

---

## Topics

### Objects

```
object responseBody.Pending_renewal_info
```

An array of elements that refers to open or failed auto-renewable subscription renewals.

```
object responseBody.Latest_receipt_info
```

An array that contains all in-app purchase transactions.

```
object responseBody.Receipt
```

The decoded version of the encoded receipt data that you send with the request to the App Store.

---

## See Also

### Deprecated
