

[Video](#) [Subscriber Account](#) /  / [VSUserAccountManager.AutoSignInTokenUpdateContext](#) / [authorization](#)

Instance Property

authorization

A state that represents a person's approval of Automatic Sign-In.

iOS 26.0+ | iPadOS 26.0+ | tvOS 26.0+

```
var authorization: VSUserAccountManager.AutoSignInAuthorization { get }
```

Mentioned in

 Signing people in to their media accounts automatically

Discussion

The system prompts the person to opt in to Automatic Sign-In when the app calls [requestAutoSignInAuthorization\(\)](#). If the person approves the prompt, the framework sets the [authorization](#) status to [VSUserAccountManager.AutoSignInAuthorization.granted](#). If the person dismisses the prompt without approving, the system leaves the authorization status [VSUserAccountManager.AutoSignInAuthorization.notDetermined](#) and the framework doesn't prompt them again until the app calls [requestAutoSignInAuthorization\(\)](#) once more.
