

[SwiftUI](#) / [AccessibilityChildBehavior](#)

## Structure

# AccessibilityChildBehavior

Defines the behavior for the child elements of the new parent element.

iOS 13.0+ | iPadOS 13.0+ | Mac Catalyst 13.0+ | macOS 10.15+ | tvOS 13.0+ | visionOS 1.0+ | watchOS 6.0+

```
struct AccessibilityChildBehavior
```

## Topics

### Getting behaviors

```
static let combine: AccessibilityChildBehavior
```

Any child accessibility element's properties are merged into the new accessibility element.

```
static let contain: AccessibilityChildBehavior
```

Any child accessibility elements become children of the new accessibility element.

```
static let ignore: AccessibilityChildBehavior
```

Any child accessibility elements become hidden.

## Relationships

### Conforms To

## See Also

### Creating accessible elements

```
func accessibilityElement(children: AccessibilityChildBehavior) -> some View
```

Creates a new accessibility element, or modifies the [AccessibilityChildBehavior](#) of the existing accessibility element.

```
func accessibilityChildren<V>(children: () -> V) -> some View
```

Replaces the existing accessibility element's children with one or more new synthetic accessibility elements.

```
func accessibilityRepresentation<V>(representation: () -> V) -> some View
```

Replaces one or more accessibility elements for this view with new accessibility elements.
