

□ Documentation

[App Store Server API](#) / TransactionInfoResponse

Object

TransactionInfoResponse

A response that contains signed transaction information for a single transaction.

App Store Server API 1.8+

```
object TransactionInfoResponse
```

Properties

signedTransaction	A customer's in-app purchase transaction, signed by Apple, in JSON Web Signature (JWS) format.
Info	
JWSTransaction	

Mentioned in

 [App Store Server API changelog](#)

Discussion

The TransactionInfoResponse contains information about the transaction that you request using the [Get Transaction Info](#) endpoint. The `transactionId` in the signed TransactionInfo matches the transactionId you provide in the request path.

Topics

[Response data types](#)

`type JWSTransaction`

Transaction information signed by the App Store, in JSON Web Signature (JWS) Compact Serialization format.
