Object

# CiTagStartCondition

Settings for a start condition that starts a build if a Git tag changes.

App Store Connect API 1.5+

```
object CiTagStartCondition
```

---

## Properties

**autoCancel**  
boolean  
A Boolean value that indicates whether Xcode Cloud automatically cancels or skips builds.

**filesAndFoldersRule**  
[CiFilesAndFolders](#)  
Rule  
Settings Xcode Cloud uses to determine whether a change to a tag should start a new build or not.

**source**  
[CiTagPatterns](#)  
The source branch name and custom patterns you configure for a workflow that starts a new build for changes to a Git tag.

---

## Topics

### Objects

```
object CiTagPatterns
```

Case-sensitive patterns Xcode Cloud uses to determine if a change meets tag names you configure for a workflow's start condition.
