[Apple Pay on the Web / Payment Request API](#)

API Collection

Payment Request API

Accept payments on your website with Apple Pay using the Payment Request API.

Overview

The Payment Request API is a cross-browser payment API under development by the W3C. You can use the Payment Request API to accept various payment methods in exchange for physical or digital goods on your website. *Payment methods* include payment solutions the platform provides, such as Apple Pay. For more information on the Payment Request API, see the [W3C Payment Request API specification](#).
