Enumeration

# AAAttributionError.Code

The error code that the parent class issues.

iOS 14.3+ | iPadOS 14.3+ | Mac Catalyst 14.3+ | macOS 11.1+ | visionOS 1.0+

`enum` Code

## Topics

### Creating an error code

`init?(rawValue: Int)`

Creates an error code structure with the specified raw value.

### Determining the cause of an error

`case internalError`

The server is unable to provide a token because of an internal error.

`case networkError`

The server is unable to provide a token because the internet isn't available.

`case platformNotSupported`

The server is unable to provide a token because of an unsupported operating system.

### Getting information about error codes

```
var localizedDescription: String { get }
```

Retrieve the localized description for this error.

## Comparing errors

```
func != (lhs: (), rhs: ()) -> Bool
```

Returns a Boolean value indicating whether any corresponding components of the two tuples are not equal.

---

## Relationships

### Conforms To

BitwiseCopyable

Equatable
