

[Core Graphics](#) / [ColorSyncProfile](#)

Class

ColorSyncProfile

iOS | iPadOS | Mac Catalyst | macOS | tvOS | visionOS | watchOS

```
class ColorSyncProfile
```

Relationships

Conforms To

Equatable, Hashable

See Also

Structures

```
class CGPSConverter
```

An opaque data type used to convert PostScript data to PDF data.

```
struct CGCaptureOptions
```

Configuration parameters that are used when capturing displays.

```
struct CGConfigureOption
```

The scope of the changes in a display configuration transaction.

```
struct CGDeviceColor
```

```
struct CGDisplayChangeSummaryFlags
```

The configuration parameters that are passed to a display reconfiguration callback function.

```
struct CGEventFilterMask
```

Specify masks for classes of low-level events that can be filtered during event suppression states.

```
struct CGEventFlags
```

Constants that indicate the modifier key state at the time an event is created, as well as other event-related states.

```
typealias CGEventTapInformation
```

Defines the structure used to report information about event taps.

```
struct CGScreenUpdateMoveDelta
```

The distance, in pixel units, that an onscreen region moves.

```
struct CGScreenUpdateOperation
```

Types of screen-update operations.

```
struct CGWindowImageOption
```

The data type to use to specify the type of image to be generated for a window.

```
struct CGWindowListOption
```

The data type used to specify the options for gathering a list of windows.

```
struct CGColorBufferFormat
```

```
struct CGColorDataFormat
```

```
struct CGPDFAccessPermissions
```
