App Store Server Notifications changelog

Learn about changes to the App Store Server Notifications service.

Overview

App Store Server Notifications has two versions of notifications. Version 1 notifications and the [App Store Server Notifications V1](#) endpoint are deprecated. Instead, implement the [App Store Server Notifications V2](#) endpoint on your server to receive version 2 notifications.

To set up your server to receive notifications, see [Enabling App Store Server Notifications](#). Use this changelog to learn about feature updates, version information, deprecations, and removals for App Store Server Notifications.

November 4, 2025

New features

- Updated the [responseBodyV2DecodedPayload](#) to include the new payload object, [appData](#).
- Added the notification type [RESCIND_CONSENT](#) to [notificationType](#).

October 29, 2025

New features

- Added the [ONE_TIME](#) value to [offerDiscountType](#) to indicate In-App Purchase offer codes.

June 26, 2025

New features

- Added the ACTIVE_TOKEN_REMINDER and CREATED values to subtype, which can appear in notifications with an EXTERNAL_PURCHASE_TOKEN notificationType.
- Updated externalPurchaseToken to include the new fields tokenType and tokenExpirationDate.

May 27, 2025

New features

- The ONE_TIME_CHARGE notificationType is now available in the production environment.

March 24, 2025

New features

- Added the notification types METADATA_UPDATE and MIGRATE to notificationType.
- Added the previousOriginalTransactionId field to the JWSTransactionDecodedPayload.

February 21, 2025

New features

- Updated the JWSRenewalInfoDecodedPayload and JWSTransactionDecodedPayload to include the new appTransactionId and offerPeriod fields.
- Updated the JWSRenewalInfoDecodedPayload to include the appAccountToken field.

January 17, 2025

New features

- Added support for the Advanced Commerce API.

July 8, 2024

New features

- Updated the JWSRenewalInfoDecodedPayload to include the new field eligibleWinBackOfferIds.

- Added the win-back offer type to offerType.

June 10, 2024

New features

- Added the notification type ONE_TIME_CHARGE to notificationType. This notification type is currently available only in the sandbox environment.
- Added the fields renewalPrice, currency, and offerDiscountType to the JWSRenewalInfoDecodedPayload.

April 11, 2024

New features

- Added the consumptionRequestReason to the data object.
- The CONSUMPTION_REQUEST notificationType added notifications for refund requests for auto-renewable subscriptions.

March 12, 2024

New features

- The type of the price field changed from int32 to int64.

February 29, 2024

New features

- Added a new notificationType: EXTERNAL_PURCHASE_TOKEN and a subtype: UNREPORTED.
- Updated the responseBodyV2DecodedPayload to include the new payload object, externalPurchaseToken.
- Added the types externalPurchaseId and tokenCreationDate.

January 23, 2024

New features

- Changed the notification type the App Store server sends when a customer redeems a subscription offer for an inactive subscription to the SUBSCRIBED [notificationType](#). The App Store server only sends the OFFER_REDEEMED notification type when customers redeem an offer on an active subscription.

October 26, 2023

New features

- Added new properties in the [JWSTransactionDecodedPayload](#) object: [price](#), [currency](#), and [offerDiscountType](#).

June 5, 2023

New features

- Added a new version 2 [notificationType](#), REFUND_REVERSED.
- Added the following new fields in the transaction decoded payload, [JWSTransactionDecodedPayload](#): [storefront](#), [storefrontId](#), and [transactionReason](#).
- Added the [renewalDate](#) field in the renewal info decoded payload, [JWSRenewalInfoDecodedPayload](#).
- Added a subscription [status](#) field in the [data](#) object of the [responseBodyV2DecodedPayload](#).
- The [responseBodyV1](#) now includes a deprecation field.

Deprecations

- The [App Store Server Notifications V1](#) endpoint and version 1 notifications are deprecated. Implement the [App Store Server Notifications V2](#) endpoint on your server to receive version 2 notifications instead.

January 30, 2023

New features

- Added a new notification type for App Store Server Notifications 2 that consists of the [notificationType](#) value RENEWAL_EXTENSION and [subtype](#) values of SUMMARY and FAILURE. This notification provides information when you extend the subscription renewal date for all active subscribers, based on a product identifier. For more information, see [Extend Subscription Renewal Dates for All Active Subscribers](#) in the [App Store Server API](#).

- Updated the [responseBodyV2DecodedPayload](#) to include the new [summary](#) object, which appears in the payload for a RENEWAL_EXTENSION notification with a SUMMARY [subtype](#).

November 7, 2022

New features

- Added the PRODUCT_NOT_FOR_SALE [subtype](#) for the EXPIRED [notificationType](#).

June 6, 2022

New features

- App Store Server Notifications 2 supports sending a TEST notification. For more information, see [notificationType](#), and the endpoints [Request a Test Notification](#) and [Get Test Notification Status](#) in the [App Store Server API](#).

May 12, 2022

New features

- In App Store Server Notifications 2, the notification subtype ACCEPTED is now sent when the App Store notifies the customer of an auto-renewable subscription price increase that doesn't require customer consent. This notification subtype is available only in version 2 notifications. For more information, see [subtype](#).

October 21, 2021 - version 2

New features

- [App Store Server Notifications V2](#) is available, and version 1 is still supported. For information about the notifications sent in version 2, see [notificationType](#), [substate](#), and [responseBodyV2](#).
- For information about the notifications sent in version 1, see [notification_type](#) and [responseBodyV1](#) (previously named [responseBody](#)).

March 10, 2021

Deprecations

- In [App Store Server Notifications Version 1](#), the following notification type and top-level objects are deprecated and removed: RENEWAL, latest_receipt, latest_receipt_info,

`latest_expired_receipt`, and `latest_expired_receipt_info`. For more information, see [responseBodyV1](#) and [notification_type](#).

November 21, 2019 - version 1

New features

- App Store Server Notifications is available.

Essentials

Enabling App Store Server Notifications

Configure your server and provide an HTTPS URL to receive notifications about in-app purchase events and unreported external purchase tokens.

Receiving App Store Server Notifications

Implement server-side code to receive and parse notification posts.

Responding to App Store Server Notifications

Send HTTP status codes to indicate the success of a notification post.
