[Apple Pay Web Merchant API Reference](#) / UnregisterMerchantRequest

Object

UnregisterMerchantRequest

The request body you use to unregister one or more merchant domains.

Apple Pay Web Merchant Registration API 1.0+

```
object UnregisterMerchantRequest
```

Properties

domainNames
[string]

(Required) A list of fully qualified domain names to unregister. If a merchant has no remaining domain names after this request removes domains, Apple Pay server deletes the merchant's registration.

partnerInternalMerchantIdentifier
string

(Required) A merchant identifier that you create to uniquely identify the registered merchant, and which you use in Apple Pay transactions and in this API.
Maximum length: 1024
Value: /a-zA-Z0-9~-_+&@\$! | , . ; /

reason
string

(Required) A short, human-readable phrase that describes the cause of unregistration.
Maximum length: 1024

Overview

The following example shows the format of an UnregisterMerchant request.

```
{  
  "domainNames" : ["subdomain-1.example.com"],  
  "partnerInternalMerchantIdentifier": "ABC-123456",  
}
```

```
"reason": "merchant has closed their account"
```

```
}
```
