

[SwiftUI](#) / [View](#) / `accessibilityIdentifier(_:isEnabled:)`

## Instance Method

# accessibilityIdentifier(\_:isEnabled:)

Uses the string you specify to identify the view.

iOS 18.0+ | iPadOS 18.0+ | Mac Catalyst 18.0+ | macOS 15.0+ | tvOS 18.0+ | visionOS 2.0+ | watchOS 11.0+

```
nonisolated
func accessibilityIdentifier(
    _ identifier: String,
    isEnabled: Bool
) -> ModifiedContent<Self, AccessibilityAttachmentModifier>
```

## Parameters

### `identifier`

The accessibility identifier to apply.

### `isEnabled`

If true the accessibility identifier is applied; otherwise the accessibility identifier is unchanged.

## Discussion

Use this value for testing. It isn't visible to the user.
