

[Authentication Services](#) / ASImportableEditableField

Structure

ASImportableEditableField

A field that someone can edit within a credential.

iOS 26.0+ | iPadOS 26.0+ | Mac Catalyst 26.0+ | macOS 26.0+ | visionOS 26.0+

```
struct ASImportableEditableField
```

Overview

Examples of editable fields include ASImportableCredential/Basic Authentication/username and [password](#) in [ASImportableCredential.Basic.Authentication](#).

This type is a representation of EditableField as defined in the Credential Exchange Format (CXF) specification. You can supply a JSON representation of a CXF EditableField to initialize an instance of this struct by using a [JSONDecoder](#) and calling [decode\(_ :from:\)](#).

Topics

Creating an editable field

```
init(id: Data?, fieldType: ASImportableEditableField.FieldType, value: String, label: String?)
```

Creates an editable field instance.

Accessing field properties
