Property List Key

com.apple.developer.wifi-aware

The entitlement the system requires for an app to use the Wi-Fi Aware framework.

iOS 26.0+ | iPadOS 26.0+

Details

Type

Array of strings

Possible Values

Subscribe

A string that states your app's intent to subscribe to services defined in your app's [WiFi Aware Services Info.plist](#) key.

Publish

A string that states your app's intent to publish services defined in your app's [WiFi Aware Services Info.plist](#) key.

Discussion

This entitlement works with the [Wi-Fi Aware](#) framework, which enables devices to securely discover, pair, and communicate with nearby devices without an internet connection or access point.

To use Wi-Fi Aware, add this entitlement to your app by enabling the Wi-Fi Aware capability on your target in Xcode. For more information, see [Adding capabilities to your app](#).

Add the `Subscribe` string, the `Publish` string, or both to this entitlement, depending on your app's intended features. The system requires this array to have at least one of the strings.
