

□ Documentation

[App Store Server API / transactionId](#)

Type

transactionId

The unique identifier for a transaction, such as an In-App Purchase, restored In-App Purchase, or subscription renewal.

App Store Server API 1.0+

```
string transactionId
```

Mentioned in

 [App Store Server API changelog](#)

Discussion

In a purchase transaction, the `transactionId` matches the original transaction identifier, [`originalTransactionId`](#). When a customer restores a purchase or renews a subscription, the `transactionId` differs.

See Also

Transaction identifiers

`type originalTransactionId`

The original transaction identifier of a purchase.

`type webOrderLineItemId`

The unique identifier of subscription-purchase events across devices, including renewals.
