

## Documentation

---

[App Store Server API / orderId](#)

Type

# orderId

The customer's order ID from an App Store receipt for in-app purchases.

App Store Server API 1.1+

```
string orderId
```

---

## Discussion

When customers make one or more in-app purchases in your app, the App Store emails them a receipt. The receipt contains an order ID. Use this order ID to call [Look Up Order ID](#). Customers can also retrieve their order IDs from their purchase history on the App Store; for more information, see [See your purchase history for the App Store, iTunes store, and more](#).

---

## See Also

### Order ID lookup

[Look Up Order ID](#)

Get a customer's in-app purchases from a receipt using the order ID.

[object OrderLookupResponse](#)

A response that includes the order lookup status and an array of signed transactions for the in-app purchases in the order.
