Overview

watchOS 10 introduces a redesigned user interface to surface timely information, communicate focused content at a glance, and make navigation consistent and predictable. This sample code project demonstrates how to update your app and widgets for watchOS 10.

Note

This sample code project is associated with WWDC23 sessions 10031: [Update your app for watchOS 10](#) and 10029: [Build widgets for the Smart Stack on Apple Watch](#). It's based on the [Backyard Birds](#) sample.
