

[EventKit](#) / [EKEventStore](#) / `fetchReminders(matching:completion:)`

Instance Method

fetchReminders(matching:completion:)

Fetches reminders that match a given predicate.

iOS 6.0+ | iPadOS 6.0+ | Mac Catalyst 13.1+ | macOS 10.8+ | visionOS 1.0+ | watchOS 2.0+

```
func fetchReminders(  
    matching predicate: NSPredicate,  
    completion: @escaping ([EKReminder]?) -> Void  
) -> Any
```

Parameters

`predicate`

A search predicate created with [predicateForReminders\(in:\)](#).

`completion`

A closure that receives the reminders that match `predicate`.

Return Value

A value that represents the asynchronous fetch request. To cancel a fetch request before it completes, pass this value to [cancelFetchRequest\(_ :\)](#).

Mentioned in

📄 [Retrieving events and reminders](#)

Discussion

Only committed reminders are included in the results. To include reminders saved using `save(_ : commit:)` with the `commit` parameter set to `false`, call `commit()` first.

This method fetches reminders asynchronously.

Searching calendars

```
func enumerateEvents(matching: NSPredicate, using: EKEventSearchCallback)
```

Finds all events that match a given predicate and calls a given callback for each event found.

```
func events(matching: NSPredicate) -> [EKEvent]
```

Finds all events that match a given predicate.

```
func cancelFetchRequest(Any)
```

Cancels the request to fetch reminders.

```
func predicateForEvents(withStart: Date, end: Date, calendars: [EKCalendar]?) -> NSPredicate
```

Creates a predicate to identify events that occur within a given date range.

```
func predicateForReminders(in: [EKCalendar]?) -> NSPredicate
```

Creates a predicate to identify all reminders in a collection of calendars.

```
func predicateForCompletedReminders(withCompletionDateStarting: Date?, ending: Date?, calendars: [EKCalendar]?) -> NSPredicate
```

Creates a predicate to identify all completed reminders that occur within a given date range.

```
func predicateForIncompleteReminders(withDueDateStarting: Date?, ending: Date?, calendars: [EKCalendar]?) -> NSPredicate
```

Creates a predicate to identify all incomplete reminders that occur within a given date range.

```
typealias EKEventSearchCallback
```

The signature for a closure that operates on events when enumerating them.
