

[Intents](#) / [INSendPaymentIntentHandling](#) / resolvePayee(for:with:)

## Instance Method

# resolvePayee(for:with:)

Resolves the recipient for a payment.

iOS 11.0+ | iPadOS 11.0+ | Mac Catalyst 13.1+ | visionOS 1.0+ | watchOS 4.0+

```
optional func resolvePayee(  
    for intent: INSendPaymentIntent,  
    with completion: @escaping (INSendPaymentPayeeResolutionResult) -> Void  
)
```

```
optional func resolvePayee(for intent: INSendPaymentIntent) async -> INSend  
PaymentPayeeResolutionResult
```

## Parameters

### intent

The intent object containing details about the user's request. Use this object to get the initial information, if any, provided by the user.

### completion

The block to execute with the resolution. You must execute this block at some point during your implementation of this method. This block has no return value and takes the following parameter:

### resolutionResult

The resolution result object containing your proposed resolution. For successful resolutions, create a resolution object whose value is the [INPerson](#) object containing detailed information about the user you identified. This parameter must not be nil.

# Discussion

Implement this method to determine whether you can send funds to the designated recipient. Use the provided payee information in the intent object to locate the corresponding user in your app. Always strive toward a successful resolution to a specific user, but always ask for confirmation of the selected user if there is some uncertainty.

If multiple users match the provided payee information, you might ask for disambiguation of the most likely candidates. When disambiguating users, provide as few choices as possible. If you find more than five possible users, consider a different resolution.

If you identify a user but there is a problem in sending funds to that user, use the [unsupported\(forReason:\)](#) method to create a [INSendPaymentPayeeResolutionResult](#) object that indicates you can't be the payee.
