# Safari Extensions Enablement

Analyze how often people enable your Safari extension.

## Overview

This report contains the count of unique devices where an extension is turned on. This data is aggregated and reported on a weekly basis per device. People turn on extensions in Safari settings or through the Page Format menu.

- Territories: Worldwide
- Platforms: iOS, iPadOS and macOS. For more information about iOS and iPadOS, see the Platforms section in [Data Completeness and Corrections](#).
- Availability:
  - Daily: Every day.
- History: On request, data is available beginning with iOS 17.4, iPadOS 17.4 and macOS 14.4.
- Completeness: Data from devices that contribute to this report can arrive as late as 8 days after the date it generates on device. You can download recent data daily, but it might be incomplete, and data updates incrementally daily, until all late-arriving events are available.
- Privacy:
  - Includes data from users who have opted to share their data with Apple and developers.
  - Individual rows will only appear if they have a value of 5 or more.
- Data Context: You can analyze your data with additional context by comparing it with the data in the [App Sessions Context](#) report, which provides a count of unique devices that use your app on a specific day. For example, if your app performed an action detailed in this report on 10 unique devices on a specific day, and the App Sessions Context report shows there were 100

unique devices running your app that day, then you can approximate that 10% of the devices running your app performed that action.

## Report Fields

| Report Field   | Description  | Data Type |
|----------------|--|-----------|
| Count          | Number of times the event occurred                   | integer   |
| Territory      | Country or region in which the event occurred        | string    |
| Date           | Date when the event occurred                         | string    |
| Platform       | OS version on the device on which the event occurred | string    |
| Device         | Type of device on which the event occurred           | string    |
| Build          | Build of device on which event occurred              | string    |
| Unique Devices | The count of unique devices                          | integer   |
| Release Type   | Type of software release                             | string    |
| Enabled        | Whether or not the extension is currently enabled    | boolean   |
