

[Authentication Services](#) / [ASAAuthorizationController](#) / `customAuthorizationMethods`

Instance Property

customAuthorizationMethods

An array of custom authorization methods for the user to choose.

tvOS 15.0+

```
var customAuthorizationMethods: [ASAAuthorizationCustomMethod] { get set }
```

Discussion

Custom authorization methods provide a unified interface for signing in to apps, while allowing the developer to customize the login experience. For example, use `other` to display a username and password field, a web-based flow, or a custom user interface.
