Instance Property

postAlert

The duration applied after the alarm has alerted at least once and moves back to the countdown state.

iOS 26.0+ | iPadOS 26.0+

```swift
var postAlert: TimeInterval?
```

Discussion

For example, this would be the snooze duration for an alarm. A timer with a repeat button could set this value to be the same as `preAlert`, or it could leave the value as `nil`. If the value is `nil` we will use the `preAlert` duration for post-alarm countdowns.
